PROFESSIONAL SUMMARY

Frontend-focused Full Stack Developer with hands-on experience building scalable, high-performance React.js and Next.js applications. Skilled in JavaScript (ES6+), Redux state management, component design, and RESTful API development and integration. Experienced in UI/UX design translation, browser-based debugging, performance testing frameworks (Jest), and full software development life cycle including coding standards, source control (Git), testing, and deployment. Strong problem-solving abilities with a track record of delivering production-ready solutions in agile environments.

TECHNICAL SKILLS

- **React Ecosystem:** React.js, Redux Toolkit, React Hooks (useEffect, useCallback, useMemo)
- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, Python
- **Testing & Debugging:** Jest, Postman, Swagger, Browser DevTools
- **Backend / Databases:** Node.js, Express.js, MongoDB, MySQL, PostgreSQL, Axios, Django
- **UI Libraries:** Tailwind CSS, Ant Design, Material Design, ReCharts
- **DevOps & Tools:** Git/GitHub, Docker, Linux, Figma, VS Code, Vercel, NPM
- **SDLC Practices:** Agile, Code Reviews, Coding Standards, Source Control Management

WORK EXPERIENCE

Software Development Engineer

Nov 2024 – May 2026 | Jaipur

Xyberia Technologies Private Limited

- Architected and delivered a full-stack Next.js + React admin dashboard with JWT based authentication, RBAC, and dual-login systems, supporting 10+ client organizations with plan-based feature access.
- Engineered reusable, responsive React component library with API driven rendering; applied React.memo, useCallback, and useMemo to optimize re-render cycles reducing development effort by 20–25% and improving UI consistency.
- Implemented Redux Toolkit for centralized state management across multi role workflows, following industry best practices for predictable state transitions and clean component separation.
- Designed scalable backend services using Node.js, Express.js, and MongoDB modeled 10+ collections and optimized queries with aggregation pipelines for multi user, multi role workflows.
- Drove frontend performance optimization via code splitting, lazy loading, Webpack bundle analysis, and browser based debugging to identify and resolve bottlenecks, improving Core Web Vitals scores.
- Applied Agile practices and led structured code reviews to enforce coding standards, Git branching strategy, and SDLC best practices; collaborated with cross functional teams to convert requirements into technical designs.

EDUCATION

M.Sc. in Computer Science, Savitribai Phule Pune University

Sep 2021 – Jul 2023 | Pune

Bachelor of Computer Applications, Panjab University

Jul 2018 – Jun 2021 | Chandigarh

PROJECTS

Org Control | Next.js · React · Redux Toolkit · TanStack Query · Zod

- Engineered a hybrid state management architecture by decoupling server side asynchronous data fetching (TanStack Query) from complex client side UI interactions (Redux Toolkit), drastically reducing unnecessary re renders.
- Established end-to-end type safety using TypeScript and Zod schema validation across API routes and forms; built a streaming AI Copilot that dynamically intercepts and contextually filters user queries based on active Redux session states.

FeedBack Desk AI | Next.js · React · TypeScript · AI Integration

- Built a full-stack AI-powered customer feedback management platform using Next.js, React.js, TypeScript, and Redux; enabled real-time feedback collection, organization, and analysis across multiple products.
- Implemented AI-driven classification to auto-tag feedback by sentiment, category, and priority — significantly reducing manual triage time and supporting faster data-driven product decisions.
- Applied lazy loading, code splitting, and memoization for optimal performance; designed responsive, accessible UI components ensuring smooth UX across all screen sizes.
